

# Information Systems (MBA)

[For additional program information see the Zicklin School website](#)

In today's competitive business environment, Information Technology plays a central role in developing strategies for competitive advantage. The Master of Business Administration (MBA) in Information Systems (IS) is a four-course major that provides students with the managerial and high-level technical skills necessary for effective business leaders.

The U.S. Department of Labor Bureau of Labor Statistics (BLS) [predicts](#) that employment of IS managers will grow faster than the average for all occupations through the year 2016. The BLS also indicates that technical knowledge is very important for many managerial positions.

Students can select from a range of courses in the major to focus on specific technologies and strategic areas of interest, such as information technology in financial markets, e-business, database management systems, and global IT. Graduates of the MBA in IS are equipped with a comprehensive business education, while specializing on the role of Information Technology in shaping, enabling, and delivering a company's strategic goals.

In addition to the MBA in IS, the Zicklin School also offers a [Master of Science](#) degree program in Information Systems.
