## Field Description

Mathematics has been described as the queen of all sciences. Understanding mathematics enables one to explain and analyze not only science and nature but almost all disciplines from archeology to zoology. Most recently, mathematics has become an indispensable tool in finance and other business related areas. To ensure that mathematics is available for students with varied backgrounds and different professional goals, the department offers courses at all levels. Advanced courses are designed to be taken by mathematics and actuarial science majors and those in related fields.

## Mathematics

The major in mathematics is designed to enable the student to enter the marketplace (industrial or educational) or to pursue further studies in mathematics or allied fields at the graduate level. Interested students are urged to contact the Department of Mathematics as early as possible. The student will be assigned an advisor who will aid in formulating an appropriate course of study. Students who want to teach mathematics in the secondary schools should consult an advisor in the Center for Advisement and Orientation.

Required Courses

## The Minor

The minor in mathematics provides students with a background in the various theories and uses of mathematics. The minor requires the completion of [MTH 3006](#) or [MTH 3010](#) and any other 3- or 4-credit mathematics course numbered 3000 or higher, **with the exceptions of [MTH 3007](#) and [MTH 4009](#) (which are not applicable toward the minor)**. Students must then complete a capstone course consisting of any mathematics course at the 4000-level or higher **with the exceptions of [MTH 4410](#) (which may not be used as a capstone course)**.
